

SHREE SIDDHIVINAYAK

FIRE

DESIGN · SUPPLY · INSTALLATION · COMMISSIONING
OF FIRE PROTECTION, DETECTION & SUPPRESSION SYSTEMS

COMPANY PROFILE · NAVI MUMBAI, INDIA

AN INTRODUCTION

Fire protection is not a fitting. It is a guarantee.

Fire protection is a fundamental requirement for petrochemical and pharmaceutical plants, storage and tank-farm areas, ports, commercial structures and high-rise developments. Effective fire fighting has been a challenge for decades, and the responsibility no longer rests with fire fighters alone. Every stakeholder in a building has a part to play.

Shree Siddhivinayak Fire Enterprises was established to carry that responsibility for owners, developers and occupiers – as a single accountable contractor for the supply, installation and consultation of every type of fire fighting system.

The firm is managed by trained and technically qualified professionals with years of experience in the design, installation and execution of fire protection, detection and suppression systems. Our record spans high-rise residential complexes, hospitals, schools, hotels, industrial units, petrol pumps, warehouses and municipal buildings – each designed, installed and tested to the requisite standards, with the emphasis always on quality of output rather than speed of billing.

We undertake turnkey projects: from consultation and design, through supply, installation and commissioning, to liaison and Fire Brigade NOC.

With Shree Siddhivinayak Fire
be guaranteed. Be safe.

We are committed to creating a competitive and co-operative environment within the society we serve, by empowering it with the right kind of knowledge.

Shantanu Dilip Ghodekar

PROPRIETOR

A single contractor, from drawing to NOC.

Most fire systems fail at the joints – between the consultant's drawing, the supplier's material and the site team's execution. We remove those joints by holding all four responsibilities ourselves.

01

Design & Consultancy

Hydraulic calculations, pump and tank sizing, riser and ring-main layouts, detection zoning and shop drawings for fixed fire fighting and protection systems.

02

Supply

Supply of all types of fixed fire fighting and protection equipment – pumps, valves, piping, hydrants, sprinklers, panels, detectors and extinguishers.

03

Installation & Execution

Ring mains, wet risers, pump rooms, sprinkler networks, detection wiring and panel commissioning – executed by our own supervised site teams.

04

Liaison & NOC

Documentation, inspection support and follow-through with the Fire Brigade until the No Objection Certificate is in the owner's hands.

Core systems

Installed & Maintained

- ◆ Automatic fire hydrant systems – wet risers, ring mains, pump rooms
- ◆ Automatic sprinkler systems
- ◆ Fire detection & suppression systems
- ◆ Smoke & heat detector systems
- ◆ High and medium velocity water spray systems
- ◆ Fire extinguishers – supply, installation, refilling
- ◆ Annual maintenance of installed systems
- ◆ Testing, commissioning & handover documentation

Specialised detection & suppression.

Data rooms, archives, switch rooms and process areas cannot be protected with water alone. Our product line extends to the systems that detect earlier and suppress without collateral damage.

A

Analogue Addressable Intelligent Fire Alarm

Device-level addressing and intelligent panels – the exact detector, the exact location, in seconds rather than the zone-level guesswork of conventional systems.

B

VESDA Very Early Smoke Detection

Aspirating detection that samples air continuously and alarms at incipient smoke levels – long before a conventional detector would respond.

C

CO₂ Flooding System

Total flooding for electrical rooms, transformer and process enclosures where water-based suppression is not an option.

D

Inert Gas (IG) Flooding System

Clean-agent inert gas suppression for occupied and equipment-critical spaces – no residue, no damage to protected assets.

Standards & compliance

Designed To

Systems are designed, installed and tested to the National Building Code and the applicable Indian Standards for fire fighting installations, and to the requirements of the local Fire Brigade – the same authority whose sign-off closes the project. Compliance is treated as the design input, not as a certificate chased at the end.

HOW WE WORK

Six stages. One accountable party.

01

Survey & Study

Site visit, drawing study, occupancy classification and identification of the statutory requirement that governs the building.

02

Design

Hydraulic calculation, equipment sizing, layout and shop drawings issued for the owner's and the authority's review.

03

Proposal

A transparent bill of quantities – make, model and specification stated for every item, with no substitution after order.

04

Supply

Procurement from established manufacturers, material inspected on receipt and stored on site under our custody.

05

Installation

Execution by our own supervised teams, in coordination with the civil, electrical and plumbing contractors on site.

06

Testing & NOC

Pressure testing, commissioning, demonstration to the authority, handover documentation and the Fire Brigade NOC.

WHY OWNERS RETURN TO US

Repeat mandates

Sudhanshu Builders, Sidus Buildcon, Chotrani, Reliable and NMMC have each awarded us multiple projects.

Occupied buildings

Hospitals, schools and hotels retrofitted while running – staged work, no shutdown of the facility.

Height & complexity

From single-floor factories to a G+36 residential tower, including basements and multi-wing developments.

CREDENTIALS AT A GLANCE

Sixty-nine buildings already stand protected.
